

REUF

Research Experiences for Undergraduate Faculty

The Research Experiences for Undergraduate Faculty (REUF) workshop equips faculty to involve their students in areas of active research.

The American Institute of Mathematics (AIM) and the Institute for Computational and Experimental Research in Mathematics (ICERM) invite applications for the Research Experiences for Undergraduate Faculty (REUF) workshop, to be held June 17-21, 2019 at ICERM in Providence, RI. This workshop, sponsored by the National Science Foundation, is one in a series of annual REUF workshops that brings together faculty at undergraduate institutions who are interested in engaging in research with their students. The workshop is also a research renewal opportunity for faculty who want to re-engage in research or are considering a change of research area.

The goals of the workshop are to promote undergraduate research in undergraduate institutions, and to forge lasting research collaborations among the participating faculty. The majority of the workshop will be spent working in small research groups on problems, reporting on progress, and formulating plans for future work. In addition, there will be opportunities for participants to continue research activities beyond the workshop week.

Accepted participants will receive support for travel, accommodation, and per diem. Preference will be given to faculty who teach and advise substantial numbers of minority students, students with disabilities, or first generation college students.

Applications for the 2019 workshop will open in January. For more information, please visit <http://reuf.aimath.org> or contact one of the workshop organizers below.

June 17 - 21, 2019 | Providence, RI
